e-Trialist™

Putting Clinical Trials in the palm of your hand!

Today!

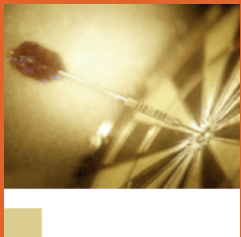

Clinical trials have been traditionally compromised by incorrect data entry, vast amounts of paperwork (both for Doctors and Clinical Trials project managers) and they are also characterised by the collection and correlation of huge amounts of data from numerous diverse sources. In addition a high degree of commitment is necessary from an, often, overstretched and paperwork burdened community of healthcare professionals for the trial to succeed.

Tomorrow!

The solution to the traditional problems encountered in Clinical Trials has been discovered, with the birth of **e-Trialist!**

- √ Completely mobile, pocket-sized and 'always on'
- √ Individual patient history available at the touch of a button
- √ Patient-side real-time data collection...
- √ ...and therefore virtual eradication of data entry errors
- √ Individual patient question prompt sequences

- √ Built-in threshold alerts
- √ Built-in visit reminders
- √ Instantaneous, one-touch upload
- √ Customised analyses/progress charts
- √ Built-in print functions
- √ Integration with existing systems

Product: e-Trialist

After data is entered into the PDA (Personal Digital Assistant) during an individual visit/round of visits it can then be uploaded to a PC either via a cradle or a wireless connection and then synchronised with the central server. This is virtually instantaneous, requires little technical knowledge or training on the part of the Doctor and leaves almost no room for data input errors and/or failures of memory. The virtual eradication of additional paperwork, the predefined question sequencing, notification of threshold crossing and the good use of the technology will all contribute to the willingness of Doctors to participate in your trials and the veracity of the data gathered.

So...what is e-Trialist?

e-Trialist is an end to end solution for your Clinical Trial needs. Utilising CMO Global's ID3© project management methodology, the process of deploying e-Trialist in your organisation begins with a consultation phase to ascertain specific trial input and output requirements; customisation of e-Trialist templates; deployment of the web application to Servers, PCs and PDAs; training; and, (if required), the supply of PDAs themselves.

CMO Global uses e-Trialist templates, developed in conjunction with one of the worlds largest Pharma companies, to design a system that fits your specific requirements. Not only can it streamline the data collection phase but it can also provide you with all of the analytical tools you need to take snap-shots of progress, flag-up threshold events and anomalous results, and is totally customisable!

For further information, or a no-obligation audit of your requirements please contact a CMO Global e-Business Consultant, and we will be happy to demonstrate how **e-Trialist** can benefit your on-going or planned clinical trials processes.
